

File
THE CARIBOO GOLD QUARTZ MINING COMPANY LIMITED (N.P.L.)

COVER PHOTO

The gas plant now under construction in the Strachan area will be similar in design and capacity to this completed plant in the same vicinity.

Pollution prevention played a major role in the choice of the site, 4,000 feet above sea level, on the highest plateau in the vicinity of Rocky Mountain House. The plant will have a 410 foot stack to ensure proper atmospheric dispersion of stack gases. Gulf Oil Canada will be operator for itself and partners which includes "Cariboo".

Report of the Directors

TO THE SHAREHOLDERS

Gas Plant Alberta

First of all may I refer to the picture of the gas plant on the cover of your report. The plant at Strachan, near Rocky Mountain House, Alberta, when completed for Gulf Oil Canada Limited and partners (including Cariboo) will be similar to the one portrayed in this picture.

Our gas extraction plan is scheduled to be in operation this December at an initial rate of 250 million cubic feet of gas per day. Cariboo's reserves of gas have been committed to Trans-Canada Pipelines Limited under a 25-year contract. At this initial design capacity, based on 350 days a year, production will be 70 billion cubic feet of residue natural gas, 290 thousand tons of sulphur and one and three quarter million barrels of pentanes plus. Cariboo's share of this production will be about one and one half percent which should give us an estimated \$400,000 cash flow for 1971. As mentioned above this contract is for 25 years (to 1995).

Your Company has ample funds available for its share of the over \$21,000,000 estimated outlay for construction costs of the gas plant and related pipeline gathering system facilities.

Strachan-Ricinus Gas Field Alberta

Cariboo is one of the original working interest partners in the Strachan Leduc (D-3) discovery well, Stampede B.A. Strachan 6-33, in west central Alberta approximately 90 miles N.W. of Calgary.

Since drilling the discovery well in 1967, Cariboo has continued to participate with United Bata Resources Limited (N.P.L.), Gulf Oil Canada Limited, Amerada Petroleum Corporation, Canadian Export Gas & Oil Ltd. and Silver Arrow Explorations Ltd. (N.P.L.) in land acquisition, exploratory drilling and development drilling of the Strachan-Ricinus play. Cariboo and partners have added 46 sections (29,440 acres) to the original 36 sections (23,040 acres) of farmout and option lands

at a cost of approximately \$10,000,000. The Company now has interests ranging from .671% to 2.5% in 52,480 acres.

Drilling subsequent to the discovery well has resulted in four additional successful Leduc D-3 sour gas wells (11-27, 11-22, 11-28 and 10-21) and one Cardium gas well completed. These wells are among the largest in Canada, 11-27 having in excess of 700 feet of net pay in the Leduc D-3 reef.

The gas reserves of Cariboo and partners' five D-3 successes are sizeable and currently constitute the bulk of the Strachan proven and marketable reserves of 1.8 trillion cubic feet. Extrapolating proven reef reserves over the large block of acreage held by Cariboo and its partners, it is probable that ultimate reserves will reach 4 to 5 trillion cubic feet. Drilling will continue to fully evaluate field potential. It is interesting to note that the present completed D-3 wells have more than ample production capacity to supply the present needs of the gas plant for the twenty five year life of the contract with Trans-Canada Pipelines Limited and so the initial input could be proportionately increased beyond the 250,000,000 cubic feet originally stated.

One mile from our southwest block of acreage, Banff, Chevron and Amoco have brought in a big well, Banff et al 6-25, which has a net pay of 650 feet in the D-3. Cariboo and partners are carrying out geophysical work preparatory to drilling an offset well this summer. This is an entirely new productive D-3 reef.

The outlook for gas sales in the 1970's: With the increase in reserves of natural gas, Canadian production rates also grew in 1969. Natural gas sales increased by 500 million cubic feet per day or 14% to total in excess of 4 billion cubic feet daily. Gas exports to the United States increased to 11.4% to average 1.85 billion cubic feet per day. U.S. utility corporations are financing Trans-Canada Pipelines Limited and other Canadian oil and gas companies in their quest for added reserves. The demand for

View of the Gold
Property at
Wells-Barkerville, B.C.

natural gas seems insatiable and the outlook is for continued expansion and higher prices right through the 70's.

Gold Mining Operation Wells-Barkerville, B.C.

The Company's properties consist of over 4,000 acres in the Cariboo District of British Columbia, extending some 7 miles along the strike of the Barkerville gold belt, between the towns of Wells and Barkerville. A study of the accompanying maps will give you a good idea of the size of the mine workings and the vast potential for further development.

Fixed assets owned by the Company include a 400 ton cyanide mill, assay office, refinery, power plant, hospital and six fireproof apartment buildings.

Underground potential: Dr. Douglas D. Campbell, our consulting geologist, states, "At an increased price for gold, to at least \$60 per oz. Cdn., the potential at both mines for increased production of ore from both vein and replacement orebodies is excellent because much known and developed vein mineralization would then be classified as profitable ore. Present proven ore plus indicated ore could well support mill production of at least 300 tons per day and would definitely be profitable since the only major capital repayment would be for the exploration program and for the necessary new mine and mill equipment."

Dr. Campbell outlines the potential thus: "Considering the known geological factors it would appear that the potential tonnages of easily developed replacement ore in unexplored Baker rocks in the various parts of the Cariboo Gold Quartz property are as follows: Island Mountain Mine (Aurum) 300,000 tons, No. 1 Mine 500,000 tons, Southeast 500,000 tons. The ultimate potential could be much in excess of these figures in each locality."

As Barron's National Business and Financial Weekly of New York states: "Whatever the future

may hold for world finance, gold is worth keeping an eye on. It remains a classic storehouse of value. It's also an excellent measure of speculative sentiment abroad."

The Bank Credit Analyst of Montreal states, May 1970: "Increasing good prospects for an early round of international monetary excitement make the holding of gold stocks attractive."

Exploration Ruttan Lake Area, Manitoba

"A pretty fair mine" is the description President D. D. Thomas gave to Sherritt Gordon's Ruttan Lake deposit at the annual meeting of the company. The Ruttan Lake ore reserves are now calculated at 25,500,000 tons averaging 1.46% copper and 2.27% zinc.

Your Company has signified its intention to participate in a syndicate headed by Mineral Mountain Mining Co. Ltd. N.P.L. in order to explore a group of claims totalling 14,400 acres in the area. This ground is considered to be an excellent exploratory and geological bet from the standpoint of its location in relation to the Sherritt Gordon Ruttan Lake orebody.

This coming December, with the gas plant going "on stream", another important milestone will be reached by your Company. With an assured annual income estimated at \$400,000 for twenty five years, the Company by next year should be able to institute a dividend policy and at the same time set aside funds for a vigorous exploration program for minerals and petroleum. Should we have a substantial increase in the price of gold your Company would have no difficulty in financing the re-opening of the mine at Wells.

On behalf of the Board of Directors

Rayden Morris
President

NOTES TO FINANCIAL STATEMENTS

FOR THE YEAR ENDED DECEMBER 31, 1969

1. VALUES

The amounts shown for investment in subsidiary companies, idle buildings and equipment, mineral properties, petroleum and natural gas properties and deferred costs represent costs to date or costs less amounts written off to date and do not necessarily reflect present or future values.

2. TERMINATION OF OPERATIONS

The company ceased operation of its gold mine at Wells, B.C. on April 15, 1967 and is disposing of its idle buildings and equipment.

3. INVESTMENT IN SUBSIDIARY COMPANIES

Consolidated financial statements have not been prepared because The Wells Townsite Company Limited, Gold Quartz Hospital Limited, Williams Creek Gold Quartz Mining Co. Limited (N.P.L.) and French Mines Ltd. (N.P.L.) are inactive. These companies had no profits or losses during the year.

The investment in shares of subsidiary companies is shown at cost or cost less amounts written off to deficit as follows:

	1969 \$	1968 \$
The Wells Townsite Company Limited - 100%	1	1
Gold Quartz Hospital Limited - 100%	1	1
Williams Creek Gold Quartz Mining Co. Limited (N.P.L.) - 89%	33,766	20,000
French Mines Ltd. (N.P.L.) - 100%	1	1
	<u>33,769</u>	<u>20,003</u>

4. MINERAL PROPERTIES

The company holds its original mineral properties at Wells, B.C. which are carried in the accounts at a nominal value of \$1.

5. PETROLEUM AND NATURAL GAS PROPERTIES

By an agreement between the company and United Bata Resources Limited, United Bata assigned to the company 5/77.5 of its participating interest in a farmout agreement between United Bata as Farmee and Gulf Oil Canada Limited as Farmor.

Under the agreement with United Bata the company has the option to participate to the extent of 5/77.5 of United Bata's interest in other farmout agreements; this has resulted in the company acquiring various interests in the "Strachan Project" for a total expenditure to December 31, 1969 of \$197,332.

The company is participating in the cost of the Strachan gas processing plant; the estimated total cost to the company is approximately \$300,000 of which \$12,691 has been paid and is included in the \$197,332 above.

6. REMUNERATION TO DIRECTORS

Total remuneration paid to a director of the company during the year was \$6,000. There was no remuneration paid to the other company directors or senior officers.

7. CAPITAL STOCK

During the year the company issued 200,000 shares at \$1.75 per share for cash totalling \$350,000.
